PROJECT

- **Creating a Maze Game**

Developed a hospital-themed educational game with a maze feature using C Language, as part of a 5-person development team. This game is considered innovative and provides an interactive gaming experience for the audience.

- **Creating GUI Form**

Developed a GUI Form interface for the Medical Records application using Java, as part of a 5-person development team. The GUI Form is user-friendly and makes it easier for medical staff to input patient data into the Medical Records system.

- **Creating UI/UX Design**

Designed UI/UX designs for Desktop and Mobile applications using Figma, as part of a 4-person UX Designer team. This design was considered user-friendly and successfully displayed interactive prototypes to improve user experience.

- **Creating a Simple Website**

Developed a website using HTML, CSS, Bootstrap, JavaScript, and JQuery as part of a team of 6 programmers. The website is designed to be responsive, interactive, and provide an optimal user experience on various devices.

- **Creating a Medical Record Website**

Developed a website with HTML, CSS, Bootstrap, JavaScript, JQuery, and PHP Laravel, as part of a team of 6 programmers. This website makes it easier for medical staff to input patient data.

- **Creating HealtyU Website**

Developed a health website HealtyU that focuses on Health Tourism, as part of a 5-person Data Analyst team. The website organizes fitness and health events such as Meditation, Zumba, and Cardio, and is designed to be responsive and interactive for optimal user experience.
